Watkins & Tasker veterinary practice

Altro XpressLay solves concrete problems

Altro XpressLay™

Watkins & Tasker Veterinary Group has three veterinary practices in North Somerset. For the newest location in Portishead, an office and warehouse were refurbished to create a new veterinary practice. The concrete floor in the building had moisture, and required a flooring solution that would be able to be installed on a damp substrate and could be completed quickly.

Nathan Sims, Director at N&S Flooring, suggested Altro XpressLay as the best flooring choice to cope with moisture issues.

Altro XpressLay in Waterfall and Blue were installed throughout the building with over 500m² laid.

Award-winning Altro XpressLay is an adhesive-free safety flooring that can be laid to a substrate that has up to 97% relative humidity. Altro XpressLay features Altro Looselay™ Technology, a system with a studded emboss on the underside of the flooring which allows subfloor moisture to escape. It is designed to lay flat and comes with tape to hold it in place while you weld. With no adhesive you get same-day welding and can walk on the floor straight away.
